

CPS Technologies

Metal Matrix Composites (MMCs)

- Composite solutions provide unmatched thermal management with a high specific stiffness
- MMCs yields desired properties not achieved by one material
- Low CTE and high thermal conductivity for superior thermal management

Hermetic Packaging

- Ceramic or glass to metal seals for reliable microelectronics packaging
- Customized solutions to meet your specification, format, and size

Hybridtech Armor®

- Patented MMC infiltration process
- Half the weight of HHS validated USG multi-hit performance
- A holistic armor solution throughout the surface area to defeat a wide array of threats

R&D Efforts

Updated R&D Lab

- Dedicated space to find solutions to your problems
- Scanning Electron Microscope and Energy Dispersive X-Ray Spectroscopy
- Fully quipped for metallographic sample preparation, failure analysis, metrology, and much more

Unique Solutions to Match Your Needs

- We work with you to build customized composite materials
- Customizable size and shape
- Maintained performance with reduced weight

Proven Research Capabilities Through Multiple Contracts with the:

- Department of Energy
- United States Navy
- United States Army

SBIR
America's Seed Fund
